

ADOX HR-50 High Resolution Film

ADOX HR-50 is based on an emulsion commonly available for technical purposes and features an ultrafine grain and superpanchromatical sensitization.

It is especially suitable for street and landscape photography.

ADOX modifies this film from the master roll and confections it to 35mm, 120 and sheets (4x5).

The film speed is enhanced to 50 ASA using ADOX's new SPEED BOOST-technology.

The gamma is reduced so it becomes perfectly usable for pictorial photography in regular developers.

A dedicated ADOX HR-50 developer is available as well. This developer is especially recommended for portrait photography.

ADOX HR-50 can be used as an Infrared film and responds extremely well to any sort of filtration (yellow, orange, red, blue, green).

The new ADOX *SNAP-ON*- Gelatin Filters are a perfect match.

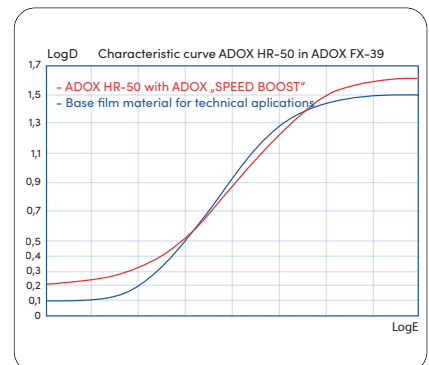

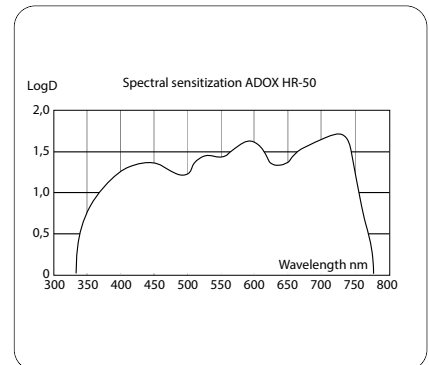

Emulsion: Superpanchromatical

Resolution: Up to 280lp/mm at an image contrast of 1000:1

ISO: 50/17°

Base: 0,1mm PET

Anti Halation: Combined AHU/NC

Technische Beschreibung:

ADOX HR-50 High Resolution Film

Carefully agitate the tank for the first 30 seconds and then tilt twice within the first 10 seconds of every full minute (slowly)!
